Professional Summary

Full-Stack Software Engineer specializing in scalable backend architectures, multi-tenant financial ledger systems, and secure digital asset workflows. Experienced in optimizing cloud infrastructure costs and building products from initial concept to live, revenue-generating production environments.

Experience

ARP Digital - Manama, Bahrain (Remote)

Full-Stack Developer | May 2025 - Present

- Architected and built the Gate product, a crypto-payment gateway processing customer checkouts with automated settlement into merchant fiat or crypto balances.
- Devised a state-tracking wallet allocation algorithm that reuses inactive Fireblocks wallet addresses, cutting active vaults by 70% to significantly reduce infrastructure costs.
- Developed a multi-tenant organization engine from scratch, implementing custom user configurations, a dynamic RBAC system, and automated identity verification via Sumsub KYC.
- Architected an internal sub-ledger system allowing organizations to isolate financial balances by project, manage sub-account withdrawals, and execute cross-border fiat transfers.
- Integrated travel rule compliance protocols, implementing real-time tracking of platform transactions to enforce regulatory checks.
- Audited and secured six frontend and backend repositories immediately upon joining, identifying and systematically patching critical infrastructure vulnerabilities.
- Drove Gate from zero to live corporate clients, delivering technical documentation, conducting product demos, and providing direct API integration support to external engineering teams.

SustainGRC - London, UK (Remote)

Lead Backend Developer | Apr 2025 - May 2025

- Led a team of 8 engineers, overseeing system architecture, code reviews, and workflows.
- Directed the architectural overhaul of core ESG services, enabling scalable data pipelines and real-time analytics.
- Hardened platform security infrastructure, refactoring core authentication systems to meet enterprise compliance checklists.
- Scaled performance and AI capabilities, optimizing microservice communication and expanding LLM orchestration features.

Backend Developer | Aug 2024 - Mar 2025

- Built the core Carbon System, developing a high-performance database schema and real-time calculation engine handling millions of dynamic emission factors.
- Designed a data validation engine used across the platform to securely verify all incoming data.
- Built extraction pipelines to ingest and parse data from external client databases and files.
- Independently developed 6 additional modules, covering Scope 3 networks, climate transition planning, due diligence, asset management, and time tracking.
- Architected an AI orchestration layer with dedicated handlers to standardize LLM communication.

ALX Africa - Nairobi, Kenya (Remote)

Software Engineering Tutor | Oct 2024 - Feb 2025

- Led one-on-one and group sessions to help learners with project planning and development.
- Provided technical feedback and mentoring, improving learner code quality and problem-solving skills.
- Collaborated with mentors and tutors to align learner progress with project deadlines.

Hawk Insight, Faculty of Engineering, Alexandria University - Alexandria, Egypt

Project Management Trainee | Jul 2024 - Sep 2024

- Developed and presented innovative business plans in a competitive environment.
- Created comprehensive strategies for project execution, aligning resources and objectives.

Cisco - Alexandria, Egypt

IT Specialist Trainee | Apr 2024 - Jul 2024

- Configured and managed LANs and cloud-connected devices to ensure seamless operations.
- Implemented network security measures and ensured continuous operations.
- Monitored network performance and troubleshoot issues effectively.

ALX Africa - Nairobi, Kenya (Remote)

Full-Stack Software Engineer | Jan 2023 - Mar 2024

- Designed, built, and optimized web applications using technologies such as Python and JavaScript.
- Developed scalable databases utilizing both SQL and NoSQL solutions.
- Engineered complex low-level algorithms in C for enhanced performance.
- Architected and configured Linux servers and CI/CD pipelines for automated, efficient application deployments.
- Collaborated effectively with peers in a fast-paced, deadline-driven coding environment.

Education

BSc in Management Information Systems

The Egyptian Institute of Alexandria Academy

Oct 2020 - May 2024

- Graduated with Honors, ranking 14th in the class, with a final project score of 99%. Achieving an overall grade of Excellent.

Skills

Languages: TypeScript, JavaScript, Python, SQL, Bash

Frameworks & Libraries: Node.js, NestJS, Express.js, Next.js, React, Django, Flask

Databases & Message Brokers: PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, Kafka

Cloud & Infrastructure: Docker, Linux, Nginx, AWS, Git, GitHub Actions, CI/CD
